PURPOSE: This book is intended for personnel of chemical research and industrial
chemical laboratories.

CONTENTS: The book contains 56 articles by scientists of the Scientific Research
Institute for Chemical Reagents (ICRI) treating methods which may be adapted
by different branches of industry in producing, analyzing, and studying in-
gredients and organic compounds of high purity. Figures, tables, and references
accompany each article. No preface is included.

where φ_i are developable in series in terms of integral positive powers of y_1, \dots, y_n . The solution of (1) is sought in the form

$F = \sum_{k_1 \dots k_n} A_{k_1 \dots k_n} (x_2 \dots x_n) y_1^{k_1} \dots y_n^{k_n}$. The coefficients $A_{k_1 \dots k_n}$

Experience in the Organization of Container Transport
of the Post

PERIODICAL:

Vestnik svyazi, 1959, Nr 9, pp 17-18 (USSR)

ABSTRACT:

This article is devoted to the use of metal containers for mail transport, based on the experience of the Groznenskaya kontora svyazi (Groznyy Communications Office). By way of introduction the author briefly discusses the handling of package post, and its mechanization; the most labor-consuming operations - loading and unloading - are little mechanized at present, he states. The Checheno-ingushskoye upravleniye svyazi (Chechen -Ingush Communications Administration) has been studying the use of containers, which considerably ease these operations in practice. The author outlines loading-unloading operations at the Groznyy Communications Office using 1) carts, 2) conveyors, and 3) containers; the latter permit cutting out 67% of

the operations involving manual labor, and decreasing the number of operations connected with loading and unloading by 45%. Further results of introducing containers are presented in tabular form; the author enumerates several advantages connected with their use. The original organization of container transport at the Communications office is outlined; the system employs an electric travelling hoist, suspended on an I-beam, with a capacity of 1 ton. The containers used were obtained with the aid of the Glavnoye pochtovoye upravleniye ministerstva svyazi RSFSR (Main Postal Administration of the Ministry of Communications of the RSFSR), and were manufactured by the Kaunasskiye masterskiye (Kaunas Workshops). The author expresses considerable dissatisfaction with these containers. A modified construction plan for these containers was presented the Ministry of Communications of the RSFSR by the Checher -Ingush Communications Administration, and

3 new containers were produced by the Masterskiye moskovskogo upravleniya svyazi (Workshop of the Moscow Communications Administration); these are presently in experimental use in Groznyy. In conclusion the author stresses the expediency of introducing containers at all stages of postal transport. There are 2 photographs and 1 table.
